

bancor Bancor introduces a new anti-fraud MICRO HOLE technology for its check scanner in full compliancy to the most restrictive rules from Ministero Economia and Finanze

bancor has developed a unique technology that allows anti-fraud system thanks to the **bancor MICRO HOLE** technology on our reader/scanner teller systems that permits to identify microhole characters on value paper supports like checks. **bancor MICRO HOLE** will detect frauds that any other anti-fraud system won't.

bancor MICRO HOLE technology comes up beside to standard acquisition in gray scale or color according to IQA with a third image of the check, thus allowing an automatic security control without any interruption in the operating process. If the check is altered in the microhole (regardless the technical fraud: manual, copy, microhole, etc.)

bancor MICRO HOLE allows the immediate recognition thanks to the third security image in which is highlighted the real physical presence of the microhole achieving an automatic and secure control without any additional cost in the operating process.

KEY BENEFITS OF BANCOR MICROHOLE TECHNOLOGY

Materiality

Materiality control is detected by sensors and stored with the document.

In all check clearing cycle

The entire process, from the branch to the clearing house can be managed in total security.

Fully automated

Fraud detection is performed automatically without human interference.

Security

No matter where the image is stored within the organization, check images are embedded together and could be signed; an alarm can be generated in case a check image manipulation is detected.

Efficiency

Labour intensive manual document inspection is replaced by highly efficient on screen inspection.

All digital

The third special image revealing fraud is digital and easily managed, forwarded, stored, retrieved and displayed without any effort or loss of time.

Bank reputation

Low fraud rates have a positive effect on the reputation of the banks involved with the public, the financial authorities and the credit rating agencies.

High return on investment

The **bancor MICRO HOLE** technology gives a substantial increase in the detection of check fraud without interrupting or delaying the processing of the checks. Time consuming manual inspection of the physical checks is no longer required.

Company with Quality System certified by Dasa and Environment Register SpA in accordance with ISO 9001:2008 and ISO 14001:2004. Numbers IQ-0311-05 and IE-0711-01.
