bancor
Thinking quality for innovation

bancor F24Easy is a latest generation OCR software that allows you to read and decode in an instant and automated way the data of the printed F24 forms, both standard and simplified, used in Italy for the payment of taxes

F24EASY

The challenge

The **bancor F24Easy** package was born from the collaboration with leading Italian financial institutions and from the use of extremely sophisticated software logics: reading the Italian F24 printed form implies extremely challenging difficulties as it is a single form that can be set with wide types of formats and fonts and infinite print qualities.

Operational efficiency

Thanks to **bancor F24Easy** it is possible to reduce compilation times to a few seconds: in fact, about 1 second is enough to read the form, which is automatically recognized by the program, and show the user all the fields valued on the screen.

Client and Server version

bancor F24Easy is available in both client and server versions: customers can choose whether to work locally through their Hardware station or send the image scanned of the F24 form to a server which will return a PDF file containing the processed data.

Integrability

It is a solution that can be integrated into all **bancor** hardware, but it is also scalable on different hardware and architectural platforms

Reliability

bancor technologies can reach a reading accuracy of 99.99%.

Main features of a dynamic software

- Automatic recognition of standard and simplified Italian F24 models
- Reading of data regardless of the direction in which the document is inserted (Automatic orientation 0 - 180 degrees)
- Page processing time ~ 1 sec
- Manage different print sizes of the document up to a tolerance of 10% from the original form
- Removal of the document fincatura, with the aim of making the data more visible and allowing the software to achieve excellent results regardless of inserting a document printed in color or black and white
- Verification of the data read for any manual pre-confirmation correction
- Business logic for verifying the consistency of amounts, tax codes, etc

Possibility of manual corrections

The user who does the operation has the possibility to interact with the software, checks the data read and, if necessary, corrects them manually before confirming the payment.

Artificial intelligence

With the aim of being a concrete support also for Italian citizens and avoiding errors in the payment of taxes, **bancor F24Easy** engine does not limit itself to read the form fields but, through its artificial intelligence, also carries out cross-checks to ensure the consistency of the amounts reported.

Know-How and flexibility

Thanks to its flexibility and dynamism, **bancor** is able to develop any Software package based on customer needs: **bancor**'s Know-How is in fact available to listen to customers' needs and develop specific software for their needs.
